

Scanner Output

Test Case – sum function

In this folder, there exists three files namely;

- Scannergrammar.txt
- sum.micro
- sum.out

Scanner Grammar

This file contains the grammar that is available at the scanner level of the compiler. It contains every predefined language and format for the code.

Sum Micro File

This file contains a micro file that is a basic sum function that can be tested c++ language compilers.

Using c++ the code can be tested using;

Micro sum.micro > sum.scanner

sum output file

This output file is gotten after running the above commands. The output file contains a predefined format that identifies grammar from the sum micro file and selects the resultant type from it.
